Important information about encryption: HSMM-MESH does not use or provide a method to enable encryption. You would have to edit the config manually to even turn it on. The references in the article below refer to the original ARRL working group on HSMM. That group is long since disbanded and references in the article do not refer to this organization.

Here we find an article written by Don N2IRZ for CQ Magazine's August 2006 edition.

It is reprinted here by permission of CQ Communications, Inc.You may download/print it for your own reference but you may not repost it or print it in quantity without specific permission from CQ.

It is in PDF form, so you will need Acrobat or one of the other free PDF readers to enjoy.
